## A Short Review of Cryptography from Ancient Times to the Modern Day

*March 14 2023, 12:10 - 13:00 (GMT +3), Gebze, TÜRKİYE*

**Vahid Karimipour**  
*Sharif University of Technology, Iran*

From ancient to modern times, cryptography has developed from simple tricks to more sophisticated mathematical systems. Nevertheless quantum mechanics has shown that even these systems are not secure. At the same time, quantum mechanics has proposed an absolutely secure substitute which is based not on mathematics but on the laws of nature. I will briefly review these developments.
